The gold standard in digital court recording

For The Record's flagship suite of software tools for capturing and managing the court record sets the digital court recording industry standard.
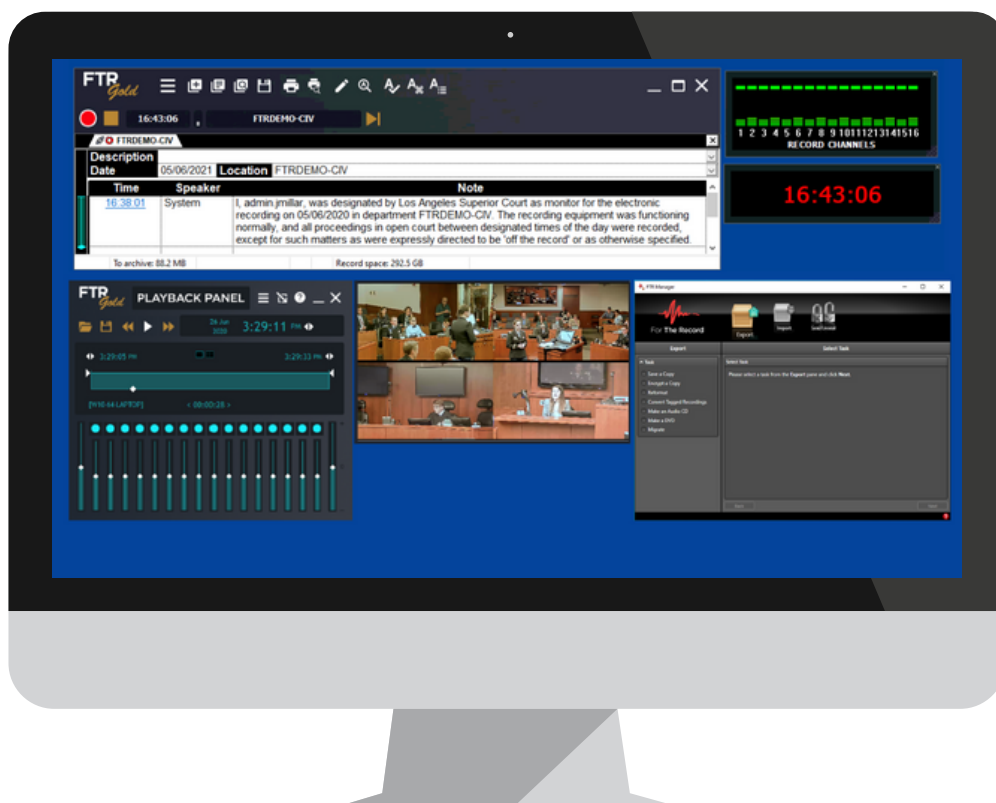

The latest version continues to expand its industry-leading capabilities with everything you need to record with confidence, enabling courts to operate better in changing environments with cloud deployments and hybrid/remote models of operation.

FTR Gold Recording Suite 7 includes AV innovations that dramatically improve the quality, capacity, and accessibility of audio and video—now with up to 16 channels of high-fidelity audio and four channels of HD video available in real time to any user working remotely on the court network through a market-leading livestreaming functionality.

With HD video recording from more non-IP video sources, improved playback and monitoring during poor network connectivity through background buffering, caching, and a reduction in the bandwidth required, and advanced storage and security features, FTR Gold Recording Suite has become more expansive to serve courts as they expand beyond their traditional four walls.

Inclusions:

FTR Reporter, Manager, and Player

Revolutionary features and benefits

- Direct livestream (within the court network) of audio and video in a WAN, VPN, or VDI environment improves live listening and confidence monitoring, enabling court monitors and reporters to monitor, annotate, or transcribe in real time while working remotely

- Recording and playback expansion with 16-channel high-fidelity audio and multichannel HD video which enhances recordings from non-IP video sources (e.g. webcams or USB cameras)

- Adjustable frame rate and upgraded codec (i.e. compression) for non-IP video sources increases video capacity

- Advanced management of court recordings with secure storage and access settings in line with department and jurisdiction policies

- Interface is compatible with various case management systems and a wider range of networked and USB audio/video devices

- Background buffering (i.e. read-ahead/caching) improves playback during poor network connectivity for users working remotely over WAN and VPN connections

- Blackmagic DeckLink PCIe and Mini Recorder cards are supported

- Group policy enabling to easily manage access to recordings

- For The Record Select Certificate app increases security, digitally certifying recordings

- Improved installer simplifies upgrades by retaining configuration settings—such as admin, audio, and video—from your currently installed version of Recording Suite

- Searchable, time-stamped Log Notes simplify locating specific portions of a hearing

Recommended System Specifications

- Operating system requirements: Windows® 10 or Windows® 11

- CPU: Intel Core i5 (any generation CPU) RAM: 8GB

- Install space: 150MB of available storage

- Recording space: FTR recommends a separate partition for audio recordings

- Audio playback: On-board sound card for playback of recordings

- FTR compatible multi-channel audio capture device for audio recording

- FTR compatible video capture device for video recording

- If archiving to optical media, a compatible optical drive will be required

- If archiving to Network, a network connection will be required
