Release Details

Version:	6.5.201
Release Date:	June 2025
Target audience:	Customers on Gold 6.5 requiring FTR Warehouse Server 7.8
Products affected:	FTR Gold Recording Suites
OS Supported:	• Windows 10 32 and 64-bit • Windows 11
Patch:	https://ftr-products.s3.ap-southeast-2.amazonaws.com/FTR+Warehouse+7.8/FTR+Gold+Patch+6.5.201.zip

Summary

This release includes a patch with all the upgrade for Gold products version 7.6 to work with FTR Warehouse Server 7.8:

New Changes:

- Supports both clear-text and encrypted passwords in Replicator Configuration Service.
- Fixes an issue where logsheet files were not replicated to the monthly folder on Warehouse Server.
- Displays a specific error message when an account is locked out in the Replicator.
- Fixes an issue that Player cannot support TRS files generated in later versions.

Earlier Changes:

- Addresses the large TRM file issue when audio signal is lost.
- Implements a new recorder API to set recording root folder path.
- Removes an obsolete library called MVVMLight from Manager.
- Addresses an issue in Manager where copying the recordings to an audio CD fails during the verification process. This issue occurs only when the recordings selected for copying cannot fit in one CD and needs additional CDs to complete copying.
- Addresses an issue in FTR Manager where the Warehouse folders could not be expanded on the select content page. This fix will allow users to select the contents from a Warehouse folder
- Addresses a dll registration issue in FTR Player that caused issues with the playback in Windows 10 build 1909. This issue has been permanently fixed for Recording Suite 6.5 with this release to cater for future Windows updates.
